

OBJECT

OBSERVATION

DATE: 4.10.2021

OBJECT: WASHING MACHINE

DURATION: 30 MINS

OBSERVATION ASSIGNMENT

1. THE OVERALL ORGANISATION OF THE AREA

The washing machine is placed in the utility area of the bathroom, because it's easy to put the clothes for wash right after a shower and since the plumbing has already been done, the machine can be just installed easily.

2. THE OVERALL LOGIC WITHIN THE CLASSIFICATION

A washing machine falls under the category "Home Appliances" in fact it has become a necessity. We all lead busy lives and we most certainly don't find time to wash clothes with our hands, so the overall logic is that it saves our time and washes the clothes quickly, and helps us save our energy.

3. SIGNIFICANT FEATURES

1. DRYER 2.HOT RINSE 3.QUICK WASH 4.DELICATES 5.CHILD LOCK 6.WATER SAVE

4. DIRECT LEARNING OUTCOME FROM THIS EXPERIENCE

I realized that such appliances are made to help man function efficiently in other areas of life productively, and saves his time, but makes us equally lazy and dependent on technology.

5. INDIRECT LEARNING

I learnt that washing is such an important part of our life that is a necessity we use every day, but never before did I take time to observe it this keenly and I was amazed at man's creation and the idea behind it.

OBSERVATION NOTES

After keenly studying the areas of the house, I chose the washing machine as my object for observation.

I am in a happy and upbeat mood. It is 3:00pm in the afternoon.

The washing machine stands in the corner of the bathroom in the utility area.

PHYSICAL FEATURES

- 1) Fully Automatic
- 2) Unique features - quick wash, wash programs, child lock, hot wash digital display
- 3) It looks like a box with a lid
- 4) It is tall and almost is 4 feet in height and 7 kgs
- 5) It washes clothes everyday and keeps us clean and fresh.
- 6) It makes the work easier, or else we would wash with hands
- 7) Its like a mini earthquake when it starts spinning
- 8) It also dries the clothes and makes it easy to dry.
