

PLANT

OBSERVATION

DATE: 21.9.2021

TIME: 2.30 PM

OBSERVATION NOTES

		Plant observation			21/9/2021
	TIME	BEAN 1	BEAN 2	BEAN 3	
1)	2:30 pm	Has swollen up	Has swollen up	Has swollen up	
2)	2:30 pm	Skin peeling off	Skin peeling off	Still the same but swollen a bit more	
3)	2:30 pm	Skin peeled off and looks split	Skin peeled off and looks split	Skin peeling off and is intact	
4)	2:30 pm	Turned slightly brown	Turned slightly brown	Green mass has appeared	
5)	2:30 pm	Started to become rotten	Started to become rotten	Started to become rotten	
6)	2:30 pm	Completely destroyed and smashed	Completely destroyed and smashed	Completely destroyed and smashed	
7)	2:30 pm	Maggots and worms appeared	Maggots and worms appeared	Maggots and worms appeared	

It was practically not possible to take the observation up to the tenth day because maggots and worms started breeding on the rotten seed.

OBSERVATION ASSIGNMENT

LIST OF MATERIALS

- a) DOUBLE BEANS 3 nos
- b) COTTON BALLS 3 nos
- c) KITCHEN TOWEL 3 nos
- d) GLASSWARE 3 nos

STEPS

- a) Take 3 glasses and wash them.**
- b) Wipe it and then line it with the kitchen towel**
- c) Place a cotton ball in the center**
- d) Place the bean between the kitchen towel and the glass, so that it's visible from outside, to observe.**
- e) Sprinkle some water on the cotton for some moisture**
- f) Leave the setup in a corner, where there is sunlight**
- g) Observe it every day for the next 10 days**
- h) Sprinkle some water every time you observe.**
- i) take down notes as you observe.**
- j) Leave it untouched and don't tamper with it.**

This experience was new to me, because I have never tried to grow a plant before; I have certainly bought a few and have nurtured it with care. I realized how important plants and greenery are in life; it just makes the world a beautiful place.

The first 2 days it felt like it's definitely going to sprout because it was growing bigger in size, but as days went by it started becoming brown, moss started growing around and it got rotten and finally started breeding worms and maggots. I realized that all this was a result of my carelessness, I had forgotten to keep it indoors one night and it had rained, resulting in excess water in the glass, which led to the rotting. Through this experience I learnt that it's important to be super vigilant when caring for a thing or even a person, or it leads to such disastrous ends.

Personally I felt that this experience was horrible for me yet I learnt a lot from my mistakes and I intend to not repeat them in the future.
